

## WyoLink Support Manager Report to the PSCC

June 13, 2013

There are 65 WyoLink sites in operation, 61 of which have had construction funded by WyoLink. Four additional sites under construction should be completed during 2013 and will bring the count of operational WyoLink sites to 69. The latest site to become active is the Powell PCE.

Due to the anticipated high cost (\$5.5M) of constructing Pow Wow, we're evaluating two or three sites to provide approximately the same coverage. WyoLink met in May with the BTNF, Teton County and Union Wireless to discuss public / private partnerships to reduce the cost of construction Pow Wow. If any significant cost reductions are solidified, this may change the decision. WyoLink continues to work with Union Wireless to share their site at Signal Mountain to provide coverage in the Togwotee Pass area. After we are given permission to co-locate with Union, they will approach the Grand Teton National Park to secure the necessary permit.

The Portable Coverage Enhancement sites at Douglas, Green River, Rawlins and Wheatland are currently under construction. We are working with Sheriff Lankford as he secures the modification to his Special Use Permit which will allow him to sign the PCE agreement for the site at Pinedale.

WyoLink has completed 1880 codeplugs to date in 2013, with an average wait time of 2 weeks. There are currently 60 codeplugs on the schedule to complete. The average wait for codeplugs to be created so far this year has been 2 weeks. The projected wait for newly requested codeplugs is about 3 days at this time. I urge everyone who has codeplug work scheduled to contact WyoLink if there are any questions about their codeplugs or their place on the schedule.

We continue to track WyoLink performance on a daily basis and are taking all possible steps to ensure the system continues to operate at it's best. There have been an increased number of busy indications in the south east portion of the state. Two WyoLink towers (85 South and Cheyenne Water Tank) have been seeing very high usage and may benefit from the addition of a couple of channels. An analysis of busy indications has been shared with the Operations Workgroup. We are continuing to perform coverage testing across the state, and WYDOT's GIS program has created a map to display our test results in an easy to understand form. The URL for this map is: <https://apps.wyoroadd.info/wyolink/coveragemap.html> and it will be posted on the WyoLink web. At this time, this map has a very small subset of the coverage testing that has been performed. In the coming month, WyoLink will be uploading the test results we have on hand to this map and as this happens the results will become more recent and inclusive. I encourage any agency having radio communication needs or issues with WyoLink to contact the WyoLink Support Office at 307-777-WLNK (9565) and we will be happy to help.

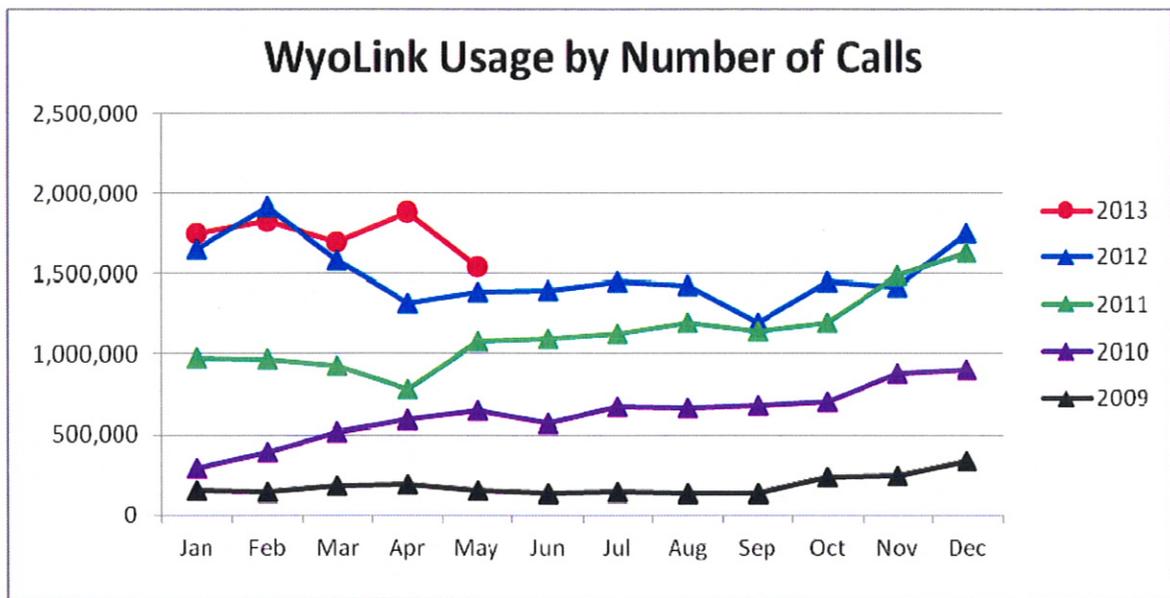

The monthly WyoLink Status Meeting Agenda and Minutes are an excellent source of information regarding the status of WyoLink. If there is anyone interested who isn't receiving these, please let me know and I'll add their name to the mailing list.

There are over 16,400 radios and consoles able to use WyoLink. There are 267 agencies approved to use WyoLink with 112 State and Federal agencies and agencies in 19 Counties having moved their operations to

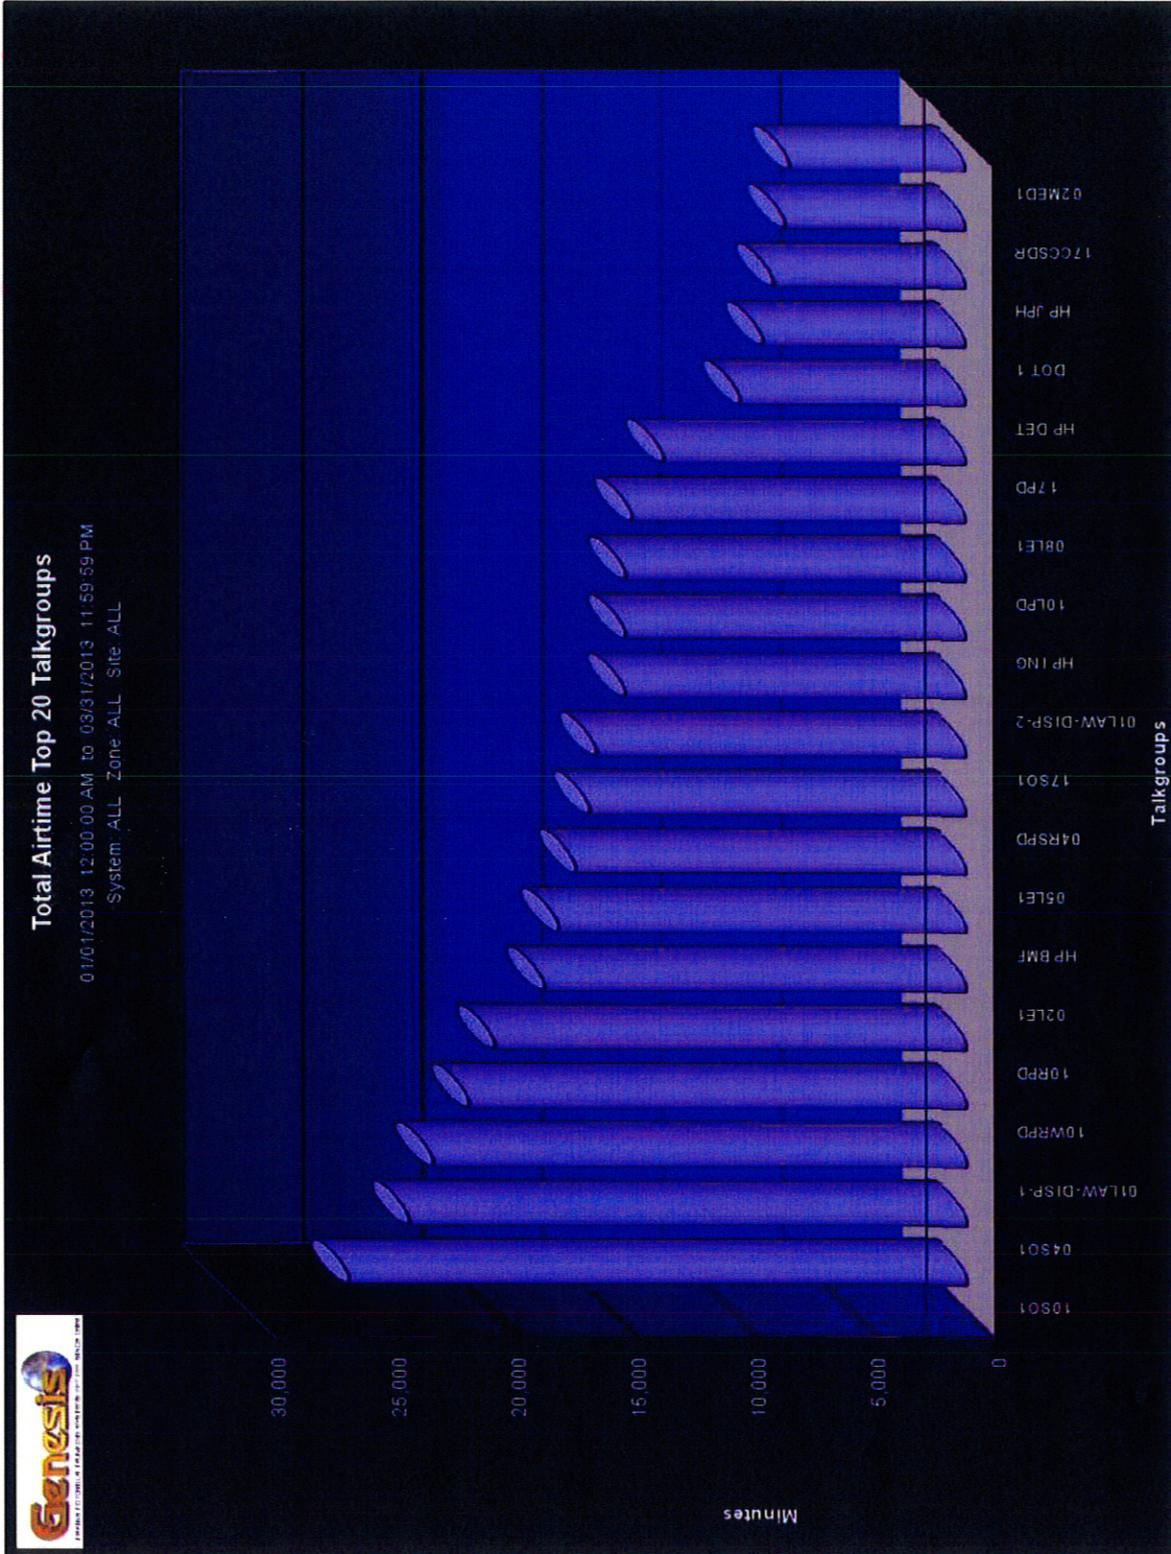

## WyoLink Support Manager Report to the PSCC

June 13, 2013

WyoLink. During a typical day, there are between 2,500 and 3,100 radios affiliated with WyoLink depending on the time of day, weather conditions and other factors. To date in 2013 (January 1<sup>st</sup> through May 31<sup>st</sup>) the WyoLink system handled over 8.7 million radio calls. Following the chart showing WyoLink Usage by Number of Calls is a chart that shows the Top 20 Talkgroups for the first quarter of 2013 by time. This provides a quick visual indication of who the top users of WyoLink are. I will be working with the Operations Workgroup to further refine this into a more meaningful display of who is using WyoLink and how much. Busy indications have been 0.024% of total call time system wide. WyoLink reliability so far in 2013 has been over 99.9%.

## Public Safety Communications Commission

May 17, 2013

Director Guy Cameron  
Wyoming Office of Homeland  
5500 Bishop Boulevard  
Cheyenne, WY 82002

Re: PSCC Budget

Dear Director Cameron,

The Public Safety Communications Commission (PSCC) Executive Committee met on May 16, 2013 to discuss the PSCC budget and the State and local Implementation Grant Program (SLIGP) from the National Telecommunications and Information Administration (NTIA).

The PSCC Executive Committee passed a motion to authorize the use of the PSCC travel or contractual services line items for reimbursement of the travel costs for the State of Wyoming, local and tribal attendees to the FirstNet-National Governor's Association State and Territory Consultation Meeting in Denver Colorado May 21 & 22, 2013.

It is understood by all parties that upon the receipt of the SLIGP grant in July or August 2013, the expended funds will be requested from the SLIGP grant.

Thank you

Respectfully,

Mark Harshman,  
PSCC Chairman
